```
INFO      [Agent] 🚀 Task:
You are a QA agent testing an ecommerce product page.
```

Your task is to check whether the product page meets certain requirements, including product details, add-to-cart functionality, variants, **and** SEO metadata.

⚠️ OUTPUT REQUIREMENTS:

- You MUST **return** only a single valid JSON object.
- No explanations, no markdown, no text outside the JSON.
- Follow the exact schema shown below.
- If some elements are missing, set "partial": **true** and list them in "issues".
- If all required elements are present, "success": **true** and "partial": **false**.

JSON schema:

```
{
  "category": "Product Page Validation",
  "success": true | false,
  "partial": true | false,
  "details": {
    "product_elements": {
      "title": "string or null",
      "price": "string or null",
      "description": "string or null",
      "add_to_cart": true | false,
      "variants": ["list of variants"] | []
    },
    "seo_metadata": {
      "title_tag": "string or null",
      "meta_description": "string or null"
    },
    "issues": ["list of strings describing missing/broken elements"]
  }
}
```

☑️ Example 1: all elements present

```
{
  "category": "Product Page Validation",
  "success": true,
  "partial": false,
  "details": {
    "product_elements": {
      "title": "Floating Birthstone Locket Necklace",
      "price": "£79.00",
      "description": "A customizable locket with birthstones.",

```

```

        "add_to_cart": true,
        "variants": ["Silver", "Gold"]
    },
    "seo_metadata": {
        "title_tag": "Floating Birthstone Locket Necklace | Abbott Lyon",
        "meta_description": "Create your personalized locket with birthstones."
    },
    "issues": []
}
}

```

☒ Example 2: missing SEO metadata

```

{
  "category": "Product Page Validation",
  "success": false,
  "partial": true,
  "details": {
    "product_elements": {
      "title": "Floating Birthstone Locket Necklace",
      "price": "£79.00",
      "description": "A customizable locket with birthstones.",
      "add_to_cart": true,
      "variants": ["Silver", "Gold"]
    },
    "seo_metadata": {
      "title_tag": null,
      "meta_description": null
    },
    "issues": ["SEO title tag is missing", "Meta description is missing"]
  }
}

```

Additional instructions:

- Scroll the page **and** wait **for** lazy-loaded content **if** necessary to extract all product elements.
- Extract the page `<title>` **and** `<meta name='description'>` from the `<head>` section.
- Capture all variants **and** optional product configurations.
- If any element cannot be extracted, mark as partial **and** document in "issues".

INFO [Agent] 🚀 Task:

You are a QA agent testing an ecommerce product page **for** image quality.

Your task is to verify that all visible images load correctly, have proper dimensions, **and** contain accessibility attributes (alt text).

⚠️ OUTPUT REQUIREMENTS:

- Return only a single valid JSON object.
- No explanations, markdown, **or** text outside JSON.
- Follow the exact schema below.
- If some images are missing **or** broken, set "partial": **true and** list them in "issues".

JSON schema:

```
{
  "category": "Image Validation",
  "success": true | false,
  "partial": true | false,
  "details": {
    "images": [
      {
        "src": "string (image URL)",
        "alt": "string or empty",
        "width": number | null,
        "height": number | null,
        "status": "ok | broken | missing alt"
      }
    ],
    "issues": ["list of strings describing missing/broken images"]
  }
}
```

☒ Example 1: all images valid

```
{
  "category": "Image Validation",
  "success": true,
  "partial": false,
  "details": {
```

```

    "images": [
      {"src": "https://example.com/img1.jpg", "alt": "Front view", "width":
800, "height": 800, "status": "ok"},
      {"src": "https://example.com/img2.jpg", "alt": "Side view", "width":
800, "height": 800, "status": "ok"}
    ],
    "issues": []
  }
}

```

☒ Example 2: missing alt text and broken image

```

{
  "category": "Image Validation",
  "success": false,
  "partial": true,
  "details": {
    "images": [
      {"src": "https://example.com/img1.jpg", "alt": "", "width": 800,
"height": 800, "status": "missing alt"},
      {"src": "https://example.com/img2.jpg", "alt": "Side view", "width":
null, "height": null, "status": "broken"}
    ],
    "issues": ["Image img1.jpg missing alt text", "Image img2.jpg failed to
load"]
  }
}

```

Additional instructions:

- Scroll and wait for lazy-loaded images.
- Capture dimensions for all visible images.
- Include all images: primary, gallery, banners, logos.
- Mark missing/broken images in "issues" and set partial=true if any problems occur.

INFO      [Agent] ✗ Task completed without success
WARNING   [cdp_use.client] WebSocket connection closed: no close frame
received or sent
INFO      [Agent] 🚀 Task:
You are a QA agent testing an ecommerce product page for image quality.

```

Your task is to verify that all visible images load correctly, have proper dimensions, and contain accessibility attributes (alt text).

⚠️ OUTPUT REQUIREMENTS:

- Return only a single valid JSON object.
- No explanations, markdown, or text outside JSON.
- Follow the exact schema below.
- If some images are missing or broken, set "partial": true and list them in "issues".

JSON schema:

```

{
  "category": "Image Validation",
  "success": true | false,
  "partial": true | false,
  "details": {
    "images": [
      {
        "src": "string (image URL)",
        "alt": "string or empty",
        "width": number | null,
        "height": number | null,
        "status": "ok | broken | missing alt"
      }
    ],
    "issues": ["list of strings describing missing/broken images"]
  }
}

```

☒ Example 1: all images valid

```
{
  "category": "Image Validation",
  "success": true,
  "partial": false,
  "details": {
    "images": [
      {"src": "https://example.com/img1.jpg", "alt": "Front view", "width":
800, "height": 800, "status": "ok"},
      {"src": "https://example.com/img2.jpg", "alt": "Side view", "width":
800, "height": 800, "status": "ok"}
    ],
    "issues": []
  }
}
```

☒ Example 2: missing alt text **and** broken image

```
{
  "category": "Image Validation",
  "success": false,
  "partial": true,
  "details": {
    "images": [
      {"src": "https://example.com/img1.jpg", "alt": "", "width": 800,
"height": 800, "status": "missing alt"},
      {"src": "https://example.com/img2.jpg", "alt": "Side view", "width":
null, "height": null, "status": "broken"}
    ],
    "issues": ["Image img1.jpg missing alt text", "Image img2.jpg failed to
load"]
  }
}
```

Additional instructions:

- Scroll **and** wait **for** lazy-loaded images.
- Capture dimensions **for** all visible images.
- Include all images: primary, gallery, banners, logos.
- Mark missing/broken images in "issues" **and** set partial=**true** **if** any problems occur.

INFO [Agent]  Task:

You are a QA agent detecting runtime errors on an ecommerce page.

Your task is to capture all errors including console exceptions, network failures, resource load issues, CORS issues, performance warnings, **and** security warnings.

⚠ OUTPUT REQUIREMENTS:

- Return only a single valid JSON object.
- No explanations, markdown, **or** text outside JSON.
- Follow the exact schema below.
- If some errors are detected but **not** all checks can be performed, set "partial": **true**.

JSON schema:

```
{
  "category": "Error Detection",
  "success": true | false,
  "partial": true | false,
  "details": {
    "errors": [
      {
        "type": "console | network | resource | CORS | performance |
security",
        "code": "string or null",
        "message": "string"
      }
    ],
    "issues": ["list of error summaries"]
  }
}
```

☒ Example 1: page has no errors

```
{
  "category": "Error Detection",
  "success": true,
  "partial": false,
  "details": {
    "errors": [],
    "issues": []
  }
}
```

☒ Example 2: runtime errors detected

```
{
  "category": "Error Detection",
  "success": false,
  "partial": true,
  "details": {
    "errors": [
      { "type": "network", "code": "404", "message": "GET /favicon.ico not
found" },
      { "type": "console", "code": null, "message": "Uncaught TypeError:
Cannot read property 'x' of undefined" }
    ],
    "issues": ["Missing favicon", "JavaScript runtime error on product page"]
  }
}
```

```
}
```

Additional instructions:

- Wait **and** observe **for** dynamically loaded content that might trigger errors.
- Capture all network **and** console errors.
- Include `partial=true` **if** any checks could **not** be completed.
- Ensure JSON strictly matches the schema above.
